Bill Nnamdi Achusim

Senior Software Engineer · AI Engineer · Founder, Tech Faculty NG

Nnewi, Nigeria · nachusim@gmail.com · linkedin.com/in/billachusim · github.com/billachusim

PROFILE

Senior software and AI engineer with 12+ years of building and shipping production software: backend platforms, AI agents and LLM applications, and consumer mobile apps. I created four consumer apps that are live on Google Play and the App Store, and I founded Tech Faculty NG, a government-licensed tech school that has trained 6,000+ students. Most recently I have evaluated frontier AI models and coding agents on real-world engineering work, including reasoning, pull requests and repository changes.

EXPERIENCE

Senior Software Engineer
2026 – Present

micro1 · Remote

- Design and build backend services, APIs and automation workflows for production software and AI-focused projects.
- Develop and review Python, TypeScript, Node.js and SQL systems for correctness, scalability and maintainability, applying testing, CI/CD and observability practices.
- Strengthen implementations through code review, debugging, architectural analysis and structured engineering feedback.

Senior Backend Engineer
2026 – Present

Reengage African Voices · AI-powered preservation of African oral histories and folklore

- Architect the backend for web and mobile apps that collect, process, store and present elderly storytellers' audio recordings.
- Built a WhatsApp audio-ingestion pipeline that moves submissions through backend services and automated workflows into storage and the public front end.
- Develop AI agent workflows that process recordings, extract information and organise content, and design the APIs connecting the app, website, agents and storage.

AI Evaluation Specialist / Senior Software Engineer
May – Aug 2026

Mercor · Remote · contract

- **Software engineering evaluation:** assessed frontier-model solutions across backend, front end, APIs, databases, distributed systems, cloud and DevOps for reasoning, design, security and maintainability, using structured rubrics and preference ranking.
- **Agent reasoning evaluation:** judged AI agents on multi-step planning, tool use, instruction following and outcomes, separating valid reasoning from plausible but incorrect solutions.
- **Git repository and pull request evaluation:** reviewed AI-generated multi-file changes to real repositories for correctness, regressions, test coverage, API compatibility and adherence to project conventions.
- Wrote detailed technical feedback that fed AI benchmarking, alignment and RLHF.

Founder & Lead Software Engineer
2022 – Present

Tech Faculty NG · Nnewi · Licensed by FMSTI through NBTI

- Built and lead an AI-first software engineering school that has trained 6,000+ students, with 75% of graduates in paid tech work within six months.
- Architected its learning platforms and Talent Pool (graduate-to-employer matching) with React, Flutter, Node.js, Python, Firebase, Supabase and GitHub Actions.
- Built AI agents, RAG systems and automation with OpenAI, Claude, Gemini, LangChain, LlamaIndex and vector stores (Pinecone, FAISS, pgvector).
- Reviewed hundreds of student engineering projects, mentor developers in system design, DevOps and AI engineering, and lead the move to agent-based software development training.
- Founded the monthly Nnewi Tech Meetup and the AI for Everything Fellowship (AI agents and data training).

Founder & Senior Software Engineer

2012 – Present

Social Faculty · Creator of Dear Claire and three more consumer apps

- Designed and built Dear Claire, an anonymous diary and advice app that grew out of 3,000+ WhatsApp conversations. It launched in November 2017, reached 35,000 users within months, raised angel investment from Fahim Saleh, and holds a 4.5★ rating from about 900 Google Play reviews.
- Built its backend, authentication, messaging and real-time infrastructure on Firebase, Node.js, TypeScript and Python, and integrated LLM, RAG and conversational AI features.
- Ship and maintain the full portfolio on both app stores, owning product, architecture, release and growth.

SELECTED PRODUCTS

Dear Claire · iOS & Android
Anonymous diary with supportive replies and community advice.

Eavesdrop · iOS & Android
Live audio rooms with real-time infrastructure and moderation.

Palmshop NG
Cloud POS and business management: payments, inventory, analytics, multi-device sync.

Alter Ego · iOS & Android
Private personality map across eight dimensions, with no account or cloud.

AI Clopedia · iOS & Android
Conversational AI encyclopedia with LLMs, RAG and vector search.

ExamsAI.ng
AI exam preparation with generated questions, study plans and automated assessment.

SKILLS

Languages	Python, TypeScript, JavaScript, SQL, Dart; working knowledge of Go, Java, Kotlin, Swift, C++, Rust
Backend	Node.js, Express, REST, GraphQL, gRPC, microservices, authentication, system design
AI	AI agents, LLM applications, RAG, prompt engineering, LLM and agent evaluation, RLHF, LangChain, LlamaIndex, OpenAI, Claude, Gemini and xAI APIs
Front end & mobile	React, Next.js, Flutter, HTML, CSS
Data	PostgreSQL, MySQL, MongoDB, Redis, Firebase, Supabase, Pinecone, FAISS, pgvector
Cloud & DevOps	AWS, Google Cloud, Azure, Docker, Kubernetes, Terraform, GitHub Actions, Linux

EDUCATION & RECOGNITION

M.Sc. Systems Engineering · University of Lagos — 2009 – 2011
B.Sc. Architecture · Anambra State University — 2005 – 2009
Software Engineering Fellow · Stanford University (online fellowship) — 2026
micro1 Frontier Engineering Challenge · certificate of participation — Sep 2026

LANGUAGES

English, Igbo
